Richard Price places Paánza's birth in the colony about 1705 and her escape to the period 1730- 40. Her African-born mother likely arrived in Suriname in the late 17th or early 18th century.	1705	22 x	
Oryza sativa	Sééi and Yáya	https: //assets. researchsqua re. com/files/rs- 22667771/v1/4 1610a35- 7993-47c1- b36e- abebc7b1304 f.pdf? c=166880052 2	Andel, Tvan, Maat, H. and Pinas, N. (2022) "Maroon women still grow rice varieties named after their ancestors who hid seeds in their hair when they escaped slavery in Suriname."	23	On 4 March 1712, the Jewish plantation owners Nassy and Cardoso discovered a village during a military raid against Maroons between the Suriname and Saramacca Rivers. The inhabitants had fled, but the soldiers were surprised by their enormous provision fields with tobacco, rice, oil palms, bannass, oranges, poultry and goats, which were too large to destroy! It is unclear whether the Matjau's lived there too, but this is the first written evidence of rice grown by Maroons in Suriname. According to Albert Abokoni, paramount chief of the Saramaccans, the growing Matjau group, including Séé and several children bom in the forest, trekked southwards for a few years until they settled at Baákawáta, far up the Pikin Lio.	1712	Jewish plantation owners discovered a Maroon village x between the Suriname and Saramacca Rivers, which is the first written evidence of rice grown by Maroons in Suriname. 23	
		https: //historiaagrar ia. com/FILE/arti culos/RHA75 Maat- van Andel. pdf	Maat, H. and van Andel, T. (2018) "The history of the Rice Gene Pool in Suriname: Circulations of rice and people from the eighteenth century until late twentieth century," Historia Agraria. Revista de agricultura e historia rural, 75, pp. 69–91.		The harsh and violent plantation regime may suggest that plantation owners were rather in- different about what the slaves were eating. This seems to be confirmed by the fact that slaves were allowed to grow their own food on small plots. There is some evidence that rice was grown on plantations, at least in small quantities, from writings of Herlein in 1718 and the Swedish botanist Rolander in 1755 (Andel, Maas & Dobreff, 2012).	1718	24 x	
Oryza glaberrima		https://www. ncbi.nlm.nih. gov/pmc/artic les/PMC2840 666/	African Rice (Oryza glaberrima Steud.): Lost Crop of the Enslaved Africans Discovered in Suriname	25	Not long after their escape, Maroons started to grow rice as a staple food around their hidden settlements. Mercenaries who were sent to capture the runaways encountered extensive rice fields in cleared swamps surrounding the temporary rebel camps. Maroons claimed that rice originally came from Africa and that it was introduced to the New Morld and later taken to the forest camps by a female ancestor who smuggled the seeds in her hair. Each of the few studies on Maroon agriculture mentions the cultivation of "red" or 'wild' or 'black rice.' After men have cleared and burned the fields, sowing, harvesting, and preparing the rice are mainly women's tasks.	1720	The rice cultivation as a food staple for the Maroons was x done primarily by women. 25	xviii
				26	Geijskes (1954) listed 21 local rice varieties grown by Paramaccan and Aucan Maroons along the Marowijne River. Hurault numbered a dozen varieties planted by the Aucan and Boni Maroons of French Guiana. Anthropologists Richard and Sally Price recorded names in the Saramaccan Maroon language for no less than 74 varieties of rice, including a 'true red rice' and a 'forest rice' or 'wild rice' (Martu allisi in the Saramaccan language) that was used mainly in rituals. At that time it was unclear to them whether 18th-century Saramaccans cultivated this 'wild rice' or simply gathered it in nearly forest swamps.	1720	Cultivation of "forest rice" or "wild rice" (mátu alisi in the Saramaccan language) used mainly in rituals. 26

(2022) "Maroon women still grow rice varieties named after their ancestors who hid seeds in their hair when they escaped slavery in Suriname."	27	The Saramaccans had settled along the upper Suriname River some 25 years before Paánza arrived with her successful new seed stock in 1739.	1739	27 x	
both	uknown woman from Aluku tripe	https: //assets. researchsqua fe. com/files/rs- 2266777/v1/4 1610a35- 7993-47c1- b36e- abebc7b1304 f.pdf2 cgf166880053	Andel, Tvan, Maat, H. and Pinas, N. (2022) "Maroon women still grow rice varieties named after their ancestors who hid seeds in their hair when they escaped slavery in Suriname."	28	Little is known over the history of rice in the Aluku community. One of the believed is that might have been Bonis' mother Bokilli Boni (c. 1790-19 Februany 1793) was a freedom fighter form which on of the revolt took name. he was born in the forest, and ancestor of the Aluku Maroons. Historia ensived African mother escaped while pregnant from her Dutch master. The first published account of rice as a staple crop among Maroons was the diary of the Scottish mercenary John Gabriel Stedman, who discovered enormous rice fields in August 1755, when he chased the Aluku in the Cottle region. In 1773, the group of Kormanin Kodig, who also had large rice fields, joined the Aluku to fight the planters collectively. They built alliage named Reise Kondré, which means rice village, in their current villages along the Lawn irver, the Aluku grow various types of Asian rice, and one variety of African rice. Rice farmers told anthropologist Marie Fleury that African women had braided nice in their hair before they entered the slave ships, and thus brought the grains to Suriname. They also mentioned that their ancestors had found black rice in the wild, in a wet savanna.	1755	The rice village of the Aluku community and the revolt of Bokilifu Boni. 28	
Oryza sativa	Sééi and Yáya	https: //assets. researchsqua re. com/files/rs- 22667771/11/4 1610a35- 7993-47c1- b36e- abebc7b1304 f.pdf2 c=166880052 5	Andel, Tvan, Maat, H. and Pinas, N. (2022) "Maroon women still grow rice varieties named after their ancestors who hid seeds in their hair when they escaped slavery in Suriname."	29	Some Saramaccan women said they had abandoned the variety because it had scabrous leaves that tiched the skin during the harvest and was difficult to mill by hand. The Mabasia grew a similar looking rice variety, 'alisi séépi', also translated as 'rice itself' and said to be an old rice taken along by runaways. The two Maroon timbes first formed one group along the Saramacca River and later separated around the mid 1760s when the Saramaccans travelled to the upper Suinname River. This happened decades after Sééi allegedly introduced her rice into the interior, so both rice types may be strongly related.	1760	The Matawai community grew a similar looking rice variety, 'alisi séépi', said to be an old rice taken along by runaways. 29	
Oryza sativa	Sééi and Yáya	https: //assets. researchsqua re. com/files/rs- 22667771/1/4 1610a35- 7993-47c1- b36e- abebc7b1304 f.pdf? c=166880052 g	Andel, T.van, Maat, H. and Pinas, N. (2022) "Maroon women still grow rice varieties named after their ancestors who hid seeds in their hair when they escaped slavery in Suriname."	30	Séér's daughter Yáya, also known as Jaja Dandé, became an important medium for the same forest spirit that earlier helped Lânu reach the Ameridians. Wâmba, speaking through Mama Yâya's mouth, protected the first runaways against other matevolent forest spirits. Yâya's spiritual advice also convinced the Saramaccans to sign a peace treaty with the colonial government in 1762 and allow the first missionaries in their territory in 1765.	1762	Yáya's spiritual convinced the Saramaccans to sign a peace treaty with the colonial government. 30

Revista de agricultura e historia rural, 75, pp. 69–91.	48	Halfway the 20th century the overlapping scientific and trade networks worked towards the same goal of pushing rice into a major export crop. Rice produced in Suriname became a major global commodity, facilitated by the continuous support of the Dutch government. This new phase of rice production largely overshadowed the continuous rice growing activities of the Maroons.	1950	Rice produced in Suriname became a major global commodity with the continuous support of the Dutch government. Revista de agricultura e historia rural, 75, pp. 69–91.	51	The rice breeding strategy of the Green Revolution arrived first in Suriname through the person of Van der Meulen. He had been leading the breeding station on Jaw where he had worked on crossings between indica and javanica varieties. By and large, indica varieties have a shorter growth period whereas javanica was less susceptible to daylight variation and responded better to fertiliser.	1960	The rice breeding strategy of the Green Revolution. 51
